### Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

#### Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

#### Solution Summary

| Field                                | Details                                                                                                                                                                                        |
|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Repository Link / URL</b>         | <a href="https://github.com/Lovakalyan05/credit_card_approval_git">https://github.com/Lovakalyan05/credit_card_approval_git</a>                                                                |
| <b>Programming Language(s)</b>       | Python, HTML, CSS, JavaScript                                                                                                                                                                  |
| <b>Framework(s) Used</b>             | Flask, Scikit-learn, XGBoost                                                                                                                                                                   |
| <b>Key Features Implemented</b>      | Credit Card Approval Prediction, Data Preprocessing, Feature Engineering, Model Comparison, Flask Web Application, IBM Watson Machine Learning Deployment                                      |
| <b>Pending / Incomplete Features</b> | Mobile Application, Real-Time Credit Score API Integration, Batch Prediction Support                                                                                                           |
| <b>Setup / Run Instructions</b>      | Install dependencies using <code>pip install -r requirements.txt</code> , run the application using <code>python app.py</code> , and open <code>http://127.0.0.1:5000</code> in a web browser. |

**Code Quality Checklist**

| S.No | Criteria                                               | Status (Yes / No) |
|------|--------------------------------------------------------|-------------------|
| 1    | Code is modular and organized into functions / classes | Yes               |
| 2    | Meaningful variable and function names are used        | Yes               |
| 3    | Code includes comments / documentation where necessary | Yes               |
| 4    | Error handling is implemented for critical operations  | Yes               |
| 5    | The application runs without critical errors           | Yes               |
| 6    | Code is committed to a version control repository      | Yes               |

**Additional Notes / Comments:**

The code is well-structured, reusable, and documented, making it easy to maintain and extend in future enhancements.
