

Scalability & Future Plan

Date	01 July 2026
Team ID	SWTID-2026-8998
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Supports limited concurrent users in the current deployment	Response time may increase during high traffic	High
2	Uses a static dataset for training	Prediction accuracy may decrease as applicant profiles change over time	High
3	Limited security and authentication features	May not be suitable for enterprise-level banking applications	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports a limited number of users	Deploy on IBM Cloud with auto-scaling to support more users
2	Data Storage	Dataset stored locally in CSV format	Migrate to a cloud database such as IBM Db2 or MongoDB
3	Performance	Single Flask server processes requests	Optimize the ML model and deploy using scalable cloud services
4	Security	Basic input validation	Add user authentication, HTTPS, and encrypted data transmission

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Improve machine learning model accuracy using larger and updated datasets	3 Months	More accurate approval predictions
Phase 2	Integrate real-time credit score and banking APIs	3 Months	Better decision-making with live financial data
Phase 3	Develop Android and iOS mobile applications	3 Months	Increased accessibility and user convenience
