

Project Executable Files

Date	01 July 2026
Team ID	SWTID-2026-8998
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	Yes
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	IBM Cloud – Watson Machine Learning
Repository Link	https://github.com/Lovakalyan05/credit_card_approval_git
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

```
# Clone the repository (if using Git)
git clone <repository_url>

# Navigate to the project folder
cd CreditCardApprovalPrediction

# Create a virtual environment
python -m venv venv

# Activate the virtual environment (Windows)
venv\Scripts\activate

# Install all required dependencies
pip install -r requirements.txt

# (Optional) Install packages manually if requirements.txt is unavailable
pip install flask pandas numpy scikit-learn xgboost joblib

# Run the Flask application
python app.py

# Open the application in your browser
http://127.0.0.1:5000
```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality of the training dataset.	Can be improved by training with larger and more diverse datasets.
2	The application processes one prediction at a time.	Can be enhanced to support batch predictions in future versions.
3	The current system uses manually entered applicant data.	Future versions can integrate banking APIs and real-time credit score services.
