

Problem-Solution Fit

Date	01 July 2026
Team ID	SWTID-2026-8998
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

[1] CUSTOMER SEGMENT(S) [CS]	[2] PROBLEMS / PAINS + ITS FREQUENCY [PR]		[3] TRIGGERS TO ACT [TR]
Retail Banks: Commercial institutions issuing consumer credit cards. FinTech Startups: Digital-first loan and micro-credit platforms. Credit Risk Analysts: Underwriters evaluating applicant default probabilities.	Slow Processing: Manual verification takes days (Every application). Human Bias: Subjective risk assessments lead to unfair rejections. Default Losses: Failure to detect high-risk fraudulent applications.	Volume Spikes: Massive surges in daily online applications. Market Competition: Competitors offering automated instant approvals. Rising NPAs: Growing bad debt requiring immediate mitigation.	Volume Spikes: Massive surges in daily online applications. Market Competition: Competitors offering automated instant approvals. Rising NPAs: Growing bad debt requiring immediate mitigation.
[4] EMOTIONS BEFORE / AFTER [EM]	[5] AVAILABLE SOLUTIONS PROS & CONS [AS]	[6] CUSTOMER LIMITATIONS [CL]	[7] BEHAVIOR + ITS INTENSITY [BE]
Before: Applicants feel anxious and frustrated by long delays. After: Users feel confident, valued, and satisfied with instant decisions.	Manual Underwriting: Thorough inspection but incredibly slow and expensive. Traditional Credit Scoring: Fast standard checks but excludes thin-file applicants.	Budget Restraints: High costs of proprietary enterprise risk software. Infrastructure Gaps: Lack of heavy servers for complex deep learning. Framework Bottlenecks: Synchronous web apps crashing under peak traffic.	Digital-First Mindset: Absolute preference for instant, fully contactless online applications (Intensity; Very High).
[8] CHANNELS OF BEHAVIOR [CH]	[9] PROBLEM ROOT / CAUSE [RC]	[10] YOUR SOLUTION [SL]	
Online: Flask web application dashboard, responsive mobile web portals. Offline: Brick-and-mortar bank branches, document verification desks.	Legacy systems rely on rigid, linear rule-bases. They cannot detect non-linear correlations across complex, multi-dimensional applicant data streams instantly.	Advent-risk secom App for connected are ccaaw in round, their ap delir solutions. AI/ML Flask Web App: A lightweight, scalable platform utilizing optimized XGBoost and Random Forest classifiers to deliver sub-second, highly accurate default-risk predictions.
